

Another Record-Breaking Milestone for Website Pros

JACKSONVILLE, FL - May 17, 2003 - Website Pros, a leading provider of website technology, services, and internet solutions for small businesses, announced today that they reached a total customer base of more than 30,000 customers.

Through partnerships with some of the most recognized names in business, Website Pros builds more websites for the small and medium-sized business (SME) market than any of its competitors. Website Pros is the industry's low-cost producer and one of the largest independent companies in the industry, developing more than 200 websites per day for small businesses.

Companies such as Switchboard, Discover Card, National Federation of Independent Businesses, Insight, Network Solutions, VeriSign, DellHost, and others have chosen Website Pros to provide internet solutions, services, and options to their small and medium-sized business customers.

David Brown, president and CEO of Website Pros, Inc., attributes the company's continued success to its ability to effectively provide leading-edge technology solutions with personal attention, support, and consultation to small businesses interested in building or growing an internet presence.

Through the combination of a proprietary software publishing and management platform, automated workflow processes, and sophisticated hosting architecture, Website Pros achieves production efficiencies that enable the company to develop and host complex commercial websites at substantial cost savings over current market prices. This technology is then coupled with superior customer care provided by expert designers, copywriters, business analysts, and Web consultants, creating an exceptional customer experience for business clients.

Website Pros offers a full suite of "Do-It-For-Me" and "Do-It-Yourself" products and services, including: website design and hosting services, e-commerce capabilities, website promotion and advertising, and website management and reporting. Website Pros products and services can be applied to customers with existing websites or to new websites, which allows the company to meet a customer anywhere along the e-business lifecycle.
